System description

1. General

COOLMANT is the registered trade name for a rigid pipe system from Brugg Pipe Systems with carrier pipes made of polyethylene. This pipe system is especially suitable for use in local and district cooling networks, in industrial and with restrictions also for combined heat pump systems (cooling and heating).

The COOLMANT district cooling pipe has a carrier pipe produced from high-density polyethylene (PE100) as per standard EN 12162. The polyethylene pressure pipes are the standard for drinking water and waste water systems, and also for the gas supply sector. The pipes are joined by means of standard screwed connectors, mechanical pipe couplings, with normal commercial electro fusion fittings or by means of butt fusion welding technology.

The insulation is made of fine-pore CFC-free rigid polyurethane foam and, together with the medium pipe, it forms a compact composite system with excellent insulation properties. The outer casing meets the requirements for plastic casing pipes as per EN 253, ensuring that the district cooling pipe is reliably protected against mechanical influences and the possibility that water could penetrate the system. The pipes can therefore be installed at outdoor temperatures down to 0°C.

In combination with the flexible COOLFLEX district cooling system, these features make it possible to implement applications involving widely varying requirements imposed by the terrain – so the installation outlay is substantially reduced.

2. Range of applications

Max. continuous operating temperature T_{Bmax} : -20 to +40 °C*
Max. permitted operating pressure p: max. 16 bar

*warm water application with limited lifetime and operating pressure (as per DIN 8074)

System description

1. Medium pipe

Material: Polyethylene class PE100 with high density, to DIN EN 12201/DIN 8074/DIN 8075

Life expectancy: 50 years at 20 °C (16 bar) or 40 °C (11.6 bar) as per DIN 8074 (SF 1.25)

Properties: suitable as district cooling, cold water and waste water pipe

PE carrier pipe	Reference temperature	Value	Test standard
Density	–	952 - 960 kg/m ³	DIN 53479
Thermal conductivity	40 °C	0.40 W/mK	DIN 52612
Tensile strengts	20 °C	32 N/mm ²	DIN 53455
Modulus of elasticity	20 °C	1000 N/mm ²	DIN 53457
Linear expansion coefficient	20 °C	1.8 · 10 E-4 1/K	DIN 52328
Crystallite melting range	–	130 - 135 °C	–

2. Thermal insulation

Material: CFC-free, 100 % CO₂-blown polyurethane foam (PUR)

PUR insulation	Reference temperature	Rigid pipes Ø 125 - Ø 315	Test standard
Density	–	> 60 kg/m ³	ISO 845
Thermal conductivity	30	≤ 0.024 W/mK	EN 253 and ISO 8497
Percentage of closed cells	–	≥ 90 %	–
Water absorption after 24 hours	–	≤ 10 %	EN 253

3. Protective casing

Material: Polyethylene class PE 100 with high density

Purpose: mechanical protection and moisture resistance

PE protective casing	Reference temperature	Rigid pipes	Test standard
Density	–	956 kg/m ³	ISO 1133
Thermal conductivity	–	0.40 W/mK	DIN 52612
Tensile strengts	–	≥ 19 N/mm ²	DIN EN 253

Installation type CLM:	2-pipe, laid in the ground
Pipe distance:	a = 0.10 m
Covera above pipe:	H = 0.60 m
Ground temperature:	T_E = 10.00 °C
Soil conductivity:	λ_E = 1.2 W/mK
Conductivity of PUR foam:	λ_{PU} = 0.024 W/mK
Conductivity of PE pipe:	λ_{PU} = 0.40 W/mK
Conductivity of PE casing:	λ_{PU} = 0.33 W/mK

Heat loss during operation:

$$q = U (T_B - T_E) \text{ [W/m]}$$

U = Heat transfer coefficient [W/mK]

T_B = Average operating temperature [°C]

T_E = Average ground temperature [°C]

VL = Flow

RL = Return

On request, we shall be glad to calculate the heat losses for surface mounted pipe systems.

End closure

Shrink-type closure, end caps (LD-PE)

Shrink-on closure

COOLMANT shrink-on closures protect the PUR insulation on the front of the COOLMANT pipes against splashing water in buildings and shafts. **Important:** in contact with water (flooding), the shrink-on closure is not necessarily watertight! The shrink-on closure also stops gas escaping from the PUR insulation.

Important fitting note

COOLMANT shrink-on closures must be pushed onto the end of the COOLMANT pipes before welding the inner pipes and must be protected against the action of heat during welding.

Material:

Heat-shrunk, cross-linked polyolefin.
Coated with sealing adhesive

Wall sealing ring

315	130	as per trench profile
355	135	as per trench profile
400	145	as per trench profile
450	155	as per trench profile

Installation depth:
 max. installation depth: 2.6 m
 Our approval is required for installation at greater depths.

SLW 30 \triangleq 300 kN total load as per DIN 1072; if subject to higher traffic loads (e.g. SLW 60), a load-distributing superstructure as per RSt075 is required.

With no traffic load, the minimum trench depth T can be reduced by 20 cm.

Surface installation

Special measures are required for surface installation of COOLMANT district cooling pipes:

- Provide supports for changes of direction
- Secure with clamps and pressure distribution plates at specified intervals, in the 90° bend
- Clamps
- Fix ends with fixed points
- Assistance with design engineering and planning from BRUGG

Type	Weight including water kg/m	Minimum Bending radius m	distance between clamps a m
125/225	15.9	–	2.0
140/225	18.8	–	2.2
160/250	24.2	–	2.4
180/280	30.6	–	2.6
200/315	38.0	–	2.8
225/315	45.7	–	3.1
250/355	56.8	–	3.3
280/400	71.4	–	3.6
315/450	90.3	–	3.9
